

Issue #16796:

Add Checkboxes to Legend Controlling Subplot Visibility

[Click to toggle the visibility of a plot](#)

One requirement for our feature is to be able to toggle a subplot by clicking on a checkbox. We implemented a function to set an onclick function on the bbox that contains a image. This function changes states and swaps the image in the bbox on click event. So, it toggles between 2 images when we click on it.
