Issue #15225:

**Show offset text on subplots after sharing axis**

Description:

There is a bug in which the x-axis is not being labelled properly whenever you are sharing the x-axis. This bug happens when you try to have the x-axis labelled on a graph in which it doesn't have a graph directly under it on the last row. The graph will have the xticks shown but will not be labelled correctly. This only happens when the x-axis is big enough in which it shows the 1e#.

Reproduction Steps:

1. Install required packages
   a. *python -m pip install -U pip*
   b. *python -m pip install -U numpy*
   c. *pip install -e git+git://github.com/RiazCharania/matplotlib.git@master#egg=riaz-matplotlib*
2. Download file 'Issue_15225.py' and run it using *python Issue_15225.py*
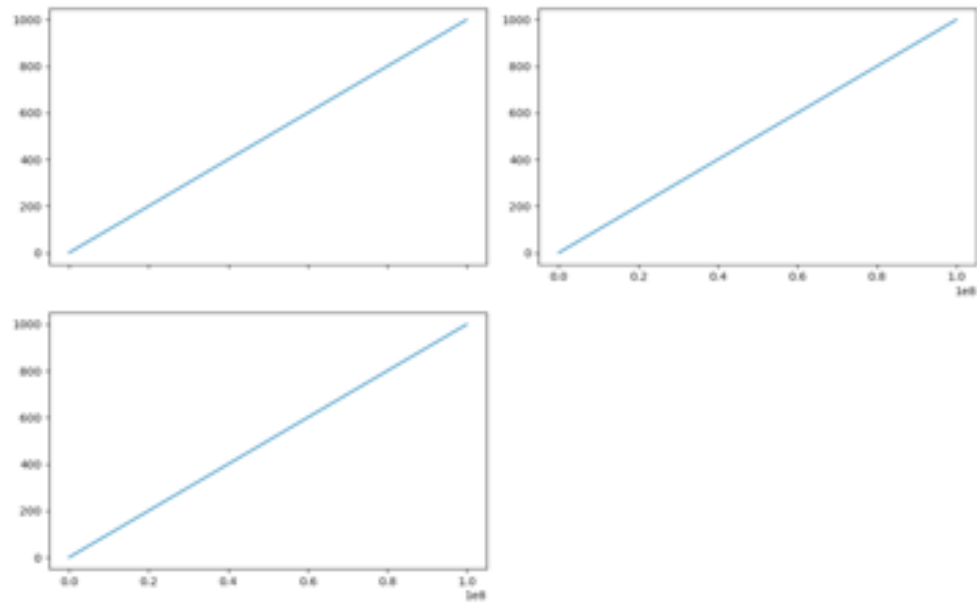

Results:

Buggy:

The x-axis for the top right graph is not labelled properly (missing 1e8).

Expected:

The top right graph x-axis is labeled properly (showing the 1e8).

If the x-axis is small the xticks are labelled properly because there is no need to put 1e# as shown above.
